

## LASIK suitability screening

Find out if you are a candidate for LASIK Eye Surgery...

Book an appointment for your Lasik suitability screening assessment.

LASIK surgery offers many patients the opportunity to reduce or eliminate their need for glasses or contact lenses.

Gulf Eye Center's laser vision correction specialists will determine if you are a good candidate for this procedure by performing a comprehensive Lasik suitability screening.

### **Preparing for your LASIK suitability screening:**

1. Stop using your contact lenses for as long as possible, so as to allow any corneal shape warpage, as well as allergic irritation, to undo itself.
  - Soft disposable or toric lenses: 14 days or more if you can.
  - Hard contact lenses: at least 30 days, and preferably up to 3 months. Soft contact lenses can be used in the meantime until about 2 weeks before the test.
  - Use lubricant eye drops (not just moisturising) very frequently every day, to aid in the smoothing of the corneal surface.
2. Because your eyes may need to be dilated, Bring a pair of sunglasses as your eyes will then be sensitive to light. You will also need to arrange transportation home.
3. Because prescription contacts might reshape your cornea to correct your vision, we need your cornea to return to its natural shape before your Pre-LASIK procedure test.
